

TO WHOM IT MAY CONCERN

All residential units in Positano Place at Naples were originally constructed with fire sprinkler systems installed by the builder. There are sprinkler heads in each room of the residential units.

The sprinkler systems in the residential buildings are inspected on a quarterly basis, and the system is monitored by the North Naples Fire Department on a 24/7 basis.

The North Naples Fire Department is automatically dispatched by a monitoring company when the system goes into alarm. The Fire Station is located one mile from Positano Place.

There are alarm horns in each bedroom of the residential unit, and alarm horns and strobes located in each hallway corridor of the building. There is a sprinkler head in each room of the unit, including the closets, laundry room and A/C and water heater closet.

The fire alarm system is inspected annually and the fire sprinkler system is inspected quarterly per Florida Statutes. The annual inspections of both systems were completed in May 2019.

Additionally, the ceiling above the third floor units is a fire rated concrete floor with the roof truss system above that deck. Positano Place at Naples was constructed in 2005 with Certificate of Occupancy issued in 2006.

If you have any further questions, please contact me.

Sincerely,

Jack Hedenstrom
